One thing I've learned this semester is that coding becomes much easier when I actually build and debug projects instead of only learning the concepts theoretically. Working with C programming and GitHub has helped me understand how important problem-solving and consistency are in development. Looking forward to building more projects and improving my skills.

Hi Garv, I'm currently studying CSIT at REVA and exploring backend development. Your experience in this area caught my attention, and I'd be happy to connect and learn from your experience.

Interesting project! I like how you've focused on solving a practical problem. I'm also working on improving my development skills through projects, so this was useful to see.
